SUMMARY

Software Engineer (coding since 2019) currently finishing a Computer Science degree at the University of Costa Rica. I have shipped and maintained production systems for clients, university platforms and my own products — including a package logistics platform that processed 13,000+ shipments and a volunteering system that replaced a 19-year-old legacy application. Comfortable across the stack: React, Next.js, TypeScript, React Native, Node.js, .NET/Blazor, MySQL and Oracle DB.

EXPERIENCE

.NET Developer (Student Assistant) | Volunta UCR, University of Costa Rica Jan 2026 – Present

- Rebuilt the university's official volunteering platform from scratch, replacing a legacy system in use since 2007.
- Delivered project/group management and a reporting module with background queues and cron jobs; the platform now serves 200+ students per month across 10 projects with real-time admin dashboards.
- *Tech: .NET, Blazor, C#, Oracle DB | volunta.ucr.ac.cr*

Full Stack Developer (Freelance) | Proactiva 2022 – Present

- Built and still maintain the gym management system that replaced whiteboard-based operations (members, class scheduling, appointments and reporting).
- Implemented role-based access, concurrency control for limited-capacity classes and email notifications; reduced administrative work from several trainers to a single person.
- *Tech: Next.js, TypeScript, Express, Node.js, MySQL, TailwindCSS | proactivacr.net*

Full Stack Developer (Freelance) | Tiquicia Express 2023 – 2025

- Developed end-to-end the US-to-Costa Rica package forwarding platform (customer portal + back-office), processing 13,000+ packages (33,000+ lbs) for 1,400+ users.
- Built real-time tracking, automatic mailbox assignment, prealerts and shipping cost calculator.
- *Tech: React, Node.js, MySQL*

Web Developer (Student Assistant) | Biomímesis, CICIMA, University of Costa Rica 2024 – 2025

- Built a suite of three connected web tools (main site, Biofonía and Códice Alado) for a biological research collective, with gamified interfaces and interactive data visualizations.
- Developed an admin panel that allows researchers to publish and manage content without developer support.
- *Tech: React, TypeScript, Prisma, MySQL, TailwindCSS | biomimesiscr.net*

PROJECTS

Delivo, founder and developer 2026

- Mobile app for distributors that manages clients, products, orders and optimizes delivery routes. Built to solve real inefficiencies in a family dairy business (reduced fuel costs and eliminated paper-based tracking).
- *Tech: React Native, Express.js, Google Cloud | appdelivo.com*

EDUCATION

Bachelor's Degree in Computing 2022 – 2026 (expected)
University of Costa Rica *Emphasis in Software Engineering*

SKILLS

Languages: TypeScript, C#, SQL, Java, PHP

Frontend: React, Next.js, React Native, Blazor, TailwindCSS

Backend: Node.js, Express, .NET Core, REST APIs

Databases: MySQL, Oracle DB, Prisma

DevOps & Tools: Docker, Git, Google Cloud, Coolify, VPS, Figma

Spoken languages: Spanish (native), English (Intermediate)
